Revisit ICD-10-CM frequently used terms

— continued from page 8

Granularity
This term in ICD-10-CM refers to the hierarchy and the amount of information in the diagnostic description.

Encounter Type (Initial, Subsequent, Sequela)

The **Initial encounter** is the first time the patient is seen for a condition requiring active treatment. The appropriate 7th character of 'A' for initial encounter should also be assigned for a patient who delayed seeking treatment.

The **Subsequent care encounter** is after the patient has completed active treatment and is receiving routine care for the healing or recovery phase. Examples of aftercare are: medication adjustment, and follow-up visits following treatment. Character 'D' is reported as the 7th character for a subsequent visit.

A **Sequela care** is the residual effect (condition produced) after the acute phase of an illness or injury has terminated. Its 7th character is 'S.' There is no time limit for when a sequela "S" code can be used. The residual may be apparent early, such as an acute condition, or it may occur months or years later, such as that due to a chronic condition. Coding of sequela generally requires two codes sequenced in the following order: The condition or nature of the sequela is sequenced first. The sequela code is sequenced second. Note the ICD-10-CM code book as there are exceptions to this rule.

> 910.8 Superficial injury of face, neck, & scalp except eye; Other unspecified injury of face, neck, and scalp without mention of infection
>
> S00.431A Superficial injury of ear; Contusion of right ear for the Initial visit
>
> S00.431D for the subsequent visit
>
> S00.431S for any follow/up visit due to a chronic condition

A 7th character on an ICD-10-CM code is usually required for a condition stemming from an injury or poisoning accident such as a drug overdose causing a reaction.

As this is a small example of the guidelines, please refer to the ICD-10-CM Coding Book for complete instructions. These guidelines can be found at these sites:
